CLAIMS

1	I claim:				
2	1. A multifunction telephone, comprising:				
3	transmit circuit means for transmitting telephony signals;				
4	receive circuit means for receiving telephony signals;				
5	a microphone electrically connect to the transmit circuit				
6	means;				
7	a speaker electrically connected to the receive circuit				
8	means;				
9	a keypad electrically connected to said transmit circuit				
10	means and said receive circuit means for entering control				
11	signals;				
12	audio means for selecting and generating audio from a				
13	plurality of sources; and				
14	muting means for controlling the injection of the audio				
15	means into the speaker and into the transmit circuit means;				
16	whereby audio, generated by the audio means, may be heard				
17	by a user of the telephone and by a telephonically connected				
18	user.

- 2. The multifunction telephone according to claim 1, wherein said muting means comprises microprocessor means and circuit means for interpreting and implementing muting options selected by the user.
- 3. The multifunction telephone according to claim 1, wherein said audio means includes a radio receiver and means for tuning said radio receiver to a desired wireless transmitting station.
- 4. The multifunction telephone according to claim 3, wherein said radio receiver comprises at least one device selected from the group consisting of an AM radio, an FM radio, a satellite radio, and a radiotelephone.
- 5. The multifunction telephone according to claim 1, wherein said audio means comprises at least one device selected from the group consisting of an MP3 player, a CD player, and a cassette player.
- 6. The multifunction telephone according to claim 1, wherein said audio means includes a volume control.

LITMAN LAW 2 OFFICES, LTD. P.O. BOX 15035 ARLINGTON, VA 22215 (703) 486-1000

- 8. The multifunction telephone according to claim 1, wherein the multifunction telephone further includes a base module housing said transmit circuit means and said receive circuit means, a handset removably attached to the base module, and a cable electrically connected to the base module and adapted for connection to a telephone network.
- 9. The multifunction telephone according to claim 8, wherein said handset is a cordless handset, electronically communicating with said base module over a wireless electronic medium.
- 10. The multifunction telephone according to claim 8, wherein said audio means is disposed in the base module.

- a cellular telephone having transmit and receive circuit means for transmitting and receiving telephony signals, respectively;
- audio means for selecting and generating audio from a plurality of sources;
- a speaker electrically connected to the receive circuit means;
- muting means for controlling the injection of audio generated by the audio means into the speaker and into the transmit circuit means; and

means for adjusting the source and volume of the audio;

whereby audio, generated by the audio means, may be selectively heard by the user of the telephone and a telephonically connected user.

12. The multifunction telephone according to claim 11, wherein said audio means comprises at least one device selected from the group consisting of an MP3 player, a CD player, a cassette player, and a radio receiver.
